Growing Points in Developmental Science: An Introduction

Growing Points in Developmental Science: An Introduction

Growing Points in Developmental Science is an ISSBD publication based on the millennium symposia papers published in the *International Journal of Behavioral Development* in 2000. This collection of overview chapters summarises the state of the art and the way forward for this discipline.

Experienced researchers as well as younger, cutting-edge scientists have contributed to this international collection. The topics range from early experience to old age, and include issues in both social and cognitive development. Particular interests are investigated, such as the biological substrates of behavioural development, early experiences in terms of both basic and applied science, and cross-cultural contexts of development. Personality, knowledge and the acquisition of memory are also considered. In each case, the authors survey the history and traditions that have marked their research areas, as well as the current status and outlook.

Growing Points in Developmental Science represents expert wisdom rooted in a bird's eye view of the trends and controversies that have helped to shape the discipline, its contributions to science and its application. It is intended as a resource for scientists of different generations interested in developmental science, and will appeal to advanced students and young investigators as well as seasoned researchers.
