The Episcopal Church, Homosexuality, and the Context of Technology

George Hobson

The Episcopal Church, Homosexuality, and the Context of Technology George Hobson
The aim of this book is to promote more serious theological discussion in the Church, especially in the mainline Protestant churches and the Episcopal Church, on the issue of homosexuality. George Hobson provides a theological perspective informed by biblical insights, on the one hand, and by analysis of the development and significance of the all-encompassing reality of science-technology, on the other. The question of technology is the determinant issue in the lives of modern men and women, for whom virtually every aspect of daily existence is controlled and oriented by technological imperatives. The central argument of the book is that reflection on the sexual revolution of our day, including the issue of homosexuality, cannot be carried forward effectively without consideration of this context of technology. A constructivist ideology, rooted in our technological power, underlies the fashionable notion that sexual behavior, even gender identity, is entirely culturally determined. Hobson opposes this notion on theological grounds and argues that the liberal disposition in the Protestant churches prevents them from seeing how the authentic Christian gospel is being subverted by this constructivism and the technologically driven quest for total control over every feature of reality that it represents.
