Advances in FDTD Computational Electrodynamics: Photonics and Nanotechnology (Artech House Antennas and Propagation Library) Allen Taflove, Steven G. Johnson, Ardavan Oskooi

Advances in photonics and nanotechnology have the potential to revolutionize humanity's ability to communicate and compute. To pursue these advances, it is mandatory to understand and properly model interactions of light with materials such as silicon and gold at the nanoscale, i.e., the span of a few tens of atoms laid side by side. These interactions are governed by the fundamental Maxwell's equations of classical electrodynamics, supplemented by quantum electrodynamics.

This book presents the current state-of-the-art in formulating and implementing computational models of these interactions. Maxwell's equations are solved using the finite-difference time-domain (FDTD) technique, pioneered by the senior editor, whose prior Artech books in this area are among the top ten most-cited in the history of engineering. You discover the most important advances in all areas of FDTD and PSTD computational modeling of electromagnetic wave interactions.

This cutting-edge resource helps you understand the latest developments in computational modeling of nanoscale optical microscopy and microchip lithography. You also explore cutting-edge details in modeling nanoscale plasmonics, including nonlocal dielectric functions, molecular interactions, and multi-level semiconductor gain. Other critical topics include nanoscale biophotonics, especially for detecting early-stage cancers, and quantum vacuum, including the Casimir effect and blackbody radiation.

Contents: Subpixel Smoothing of Curved Material Surfaces. Wave Source Conditions and Local Density of States. Perfectly Matched Layers and Adiabatic Absorbers. Plasmonics. Resonant Device Modeling and Design. Metamaterials and Negative Refraction. Transformation Optics. Meep (MIT FDTD Free Software). Biophotonics. Lithography. Computational Microscopy. Spatial Solutions. Quantum Phenomena. Hardware Acceleration.

From reader reviews:

Linda Spaulding:

Hey guys, do you would like to finds a new book you just read? May be the book with the concept Advances in FDTD Computational Electrodynamics: Photonics and Nanotechnology (Artech House Antennas and Propagation Library) suitable to you? The book was written by well known writer in this era. The particular book untitled Advances in FDTD Computational Electrodynamics: Photonics and Nanotechnology (Artech House Antennas and Propagation Library)is the main one of several books this everyone read now. This book was inspired many men and women in the world. When you read this book you will enter the new dimensions that you ever know previous to. The author explained their thought in the simple way, consequently all of people can easily to recognise the core of this e-book. This book will give you a lots of information about this world now. To help you see the represented of the world within this book.

Harry Nelson:

Are you kind of stressful person, only have 10 as well as 15 minute in your moment to upgrading your mind skill or thinking skill actually analytical thinking? Then you are experiencing problem with the book compared to can satisfy your short period of time to read it because all of this time you only find e-book that need more time to be learn. Advances in FDTD Computational Electrodynamics: Photonics and Nanotechnology (Artech House Antennas and Propagation Library) can be your answer given it can be read by you who have those short time problems.

Micheal McDonough:

Beside that Advances in FDTD Computational Electrodynamics: Photonics and Nanotechnology (Artech House Antennas and Propagation Library) in your phone, it might give you a way to get nearer to the new knowledge or details. The information and the knowledge you may got here is fresh in the oven so don't possibly be worry if you feel like an old people live in narrow town. It is good thing to have Advances in FDTD Computational Electrodynamics: Photonics and Nanotechnology (Artech House Antennas and Propagation Library) because this book offers to you readable information. Do you often have book but you would not get what it's all about. Oh come on, that would not happen if you have this within your hand. The Enjoyable agreement here cannot be questionable, similar to treasuring beautiful island. Techniques you still want to miss the idea? Find this book along with read it from at this point!

Janelle Garrity:

A lot of reserve has printed but it differs from the others. You can get it by net on social media. You can choose the very best book for you, science, comedy, novel, or whatever by simply searching from it. It is known as of book Advances in FDTD Computational Electrodynamics: Photonics and Nanotechnology (Artech House Antennas and Propagation Library). You can include your knowledge by it. Without leaving

behind the printed book, it might add your knowledge and make a person happier to read. It is most significant that, you must aware about e-book. It can bring you from one location to other place.
