Groundwater Hydrology: Engineering, Planning, and Management M. Karamouz, A. Ahmadi, M. Akhbari

Increasing demand for water, higher standards of living, depletion of resources of acceptable quality, and excessive water pollution due to urban, agricultural, and industrial expansions have caused intense environmental, social, economic, and political predicaments. More frequent and severe floods and droughts have changed the ability and resiliency of water infrastructure systems to operate and provide services to the public. These concerns and issues have also changed the way we plan and manage our surface and groundwater resources. **Groundwater Hydrology: Engineering, Planning, and Management** presents a compilation of the state-of-the-art subjects and techniques in the education and practice of groundwater and describes them in a systematic and integrated fashion useful for undergraduate and graduate students and practitioners.

The book develops a system view of groundwater fundamentals and model-making techniques through the application of science, engineering, planning, and management principles. It discusses the classical issues in groundwater hydrology and hydraulics followed by coverage of water quality issues. The authors delineate the process of analyzing data, identification, and parameter estimation; tools and model-building techniques and the conjunctive use of surface and groundwater techniques; aquifer restoration, remediation, and monitoring techniques; and analysis of risk. They touch on groundwater risk and disaster management and then explore the impact of climate change on groundwater and discuss the tools needed for analyzing future data realization and downscaling large-scale low-resolution data to local watershed and aquifer scales for impact studies.

The combined coverage of engineering and planning tools and techniques as well as specific challenges for restoration and remediation of polluted aquifers sets this book apart. It also introduces basic tools and techniques for making decisions about and planning for future groundwater development activities, taking into account regional sustainability issues. An examination of the interface between groundwater challenges, the book demonstrates how to apply systems analysis techniques to groundwater engineering, planning, and management.

From reader reviews:

Alicia Gentry:

Book is to be different per grade. Book for children right up until adult are different content. As it is known to us that book is very important usually. The book Groundwater Hydrology: Engineering, Planning, and Management ended up being making you to know about other understanding and of course you can take more information. It is quite advantages for you. The guide Groundwater Hydrology: Engineering, Planning, and Management is not only giving you much more new information but also for being your friend when you feel bored. You can spend your own spend time to read your guide. Try to make relationship with all the book Groundwater Hydrology: Engineering, Planning, and Management. You never feel lose out for everything when you read some books.

Melanie Archer:

Information is provisions for anyone to get better life, information today can get by anyone with everywhere. The information can be a understanding or any news even a problem. What people must be consider whenever those information which is from the former life are challenging to be find than now could be taking seriously which one would work to believe or which one the actual resource are convinced. If you get the unstable resource then you get it as your main information we will see huge disadvantage for you. All those possibilities will not happen within you if you take Groundwater Hydrology: Engineering, Planning, and Management as your daily resource information.

Grace Seals:

Reading a book can be one of a lot of activity that everyone in the world loves. Do you like reading book so. There are a lot of reasons why people enjoy it. First reading a guide will give you a lot of new details. When you read a book you will get new information due to the fact book is one of numerous ways to share the information as well as their idea. Second, reading a book will make you actually more imaginative. When you looking at a book especially fictional book the author will bring someone to imagine the story how the character types do it anything. Third, it is possible to share your knowledge to others. When you read this Groundwater Hydrology: Engineering, Planning, and Management, you could tells your family, friends and also soon about yours guide. Your knowledge can inspire the others, make them reading a guide.

Marlys Wieland:

Do you have something that that suits you such as book? The book lovers usually prefer to select book like comic, small story and the biggest some may be novel. Now, why not attempting Groundwater Hydrology: Engineering, Planning, and Management that give your entertainment preference will be satisfied through reading this book. Reading habit all over the world can be said as the opportunity for people to know world far better then how they react towards the world. It can't be mentioned constantly that reading practice only for the geeky man but for all of you who wants to possibly be success person. So , for all you who want to

start looking at as your good habit, you could pick Groundwater Hydrology: Engineering, Planning, and Management become your current starter.
