Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences) Wicher Bergsma, Marcel A. Croon, Jacques A. Hagenaars

Marginal Models for Dependent, Clustered, and Longitudinal Categorical Data provides a comprehensive overview of the basic principles of marginal modeling and offers a wide range of possible applications. Marginal models are often the best choice for answering important research questions when dependent observations are involved, as the many real world examples in this book show.

In the social, behavioral, educational, economic, and biomedical sciences, data are often collected in ways that introduce dependencies in the observations to be compared. For example, the same respondents are interviewed at several occasions, several members of networks or groups are interviewed within the same survey, or, within families, both children and parents are investigated. Statistical methods that take the dependencies in the data into account must then be used, e.g., when observations at time one and time two are compared in longitudinal studies. At present, researchers almost automatically turn to multi-level models or to GEE estimation to deal with these dependencies. Despite the enormous potential and applicability of these recent developments, they require restrictive assumptions on the nature of the dependencies in the data. The marginal models of this book provide another way of dealing with these dependencies, without the need for such assumptions, and can be used to answer research questions directly at the intended marginal level. The maximum likelihood method, with its attractive statistical properties, is used for fitting the models.

This book has mainly been written with applied researchers in mind. It includes many real world examples, explains the types of research questions for which marginal modeling is useful, and provides a detailed description of how to apply marginal models for a great diversity of research questions. All these examples are presented on the book's website (www.cmm.st), along with user friendly programs.

From reader reviews:

Angela Drew:

Why don't make it to become your habit? Right now, try to prepare your time to do the important act, like looking for your favorite guide and reading a e-book. Beside you can solve your condition; you can add your knowledge by the reserve entitled Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences). Try to face the book Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences) as your friend. It means that it can for being your friend when you feel alone and beside associated with course make you smarter than previously. Yeah, it is very fortuned for you personally. The book makes you considerably more confidence because you can know everything by the book. So , let me make new experience and also knowledge with this book.

Trevor Cianciolo:

Here thing why this specific Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences) are different and dependable to be yours. First of all reading a book is good but it depends in the content than it which is the content is as yummy as food or not. Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences) giving you information deeper since different ways, you can find any guide out there but there is no reserve that similar with Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences). It gives you thrill reading through journey, its open up your own personal eyes about the thing this happened in the world which is possibly can be happened around you. You can bring everywhere like in recreation area, café, or even in your means home by train. If you are having difficulties in bringing the printed book maybe the form of Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences) in e-book can be your alternative.

Neil Owens:

Reading a book to get new life style in this yr; every people loves to study a book. When you read a book you can get a great deal of benefit. When you read ebooks, you can improve your knowledge, simply because book has a lot of information upon it. The information that you will get depend on what sorts of book that you have read. In order to get information about your review, you can read education books, but if you want to entertain yourself you can read a fiction books, these kinds of us novel, comics, along with soon. The Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences) will give you a new experience in looking at a book.

Thomas Daniels:

Is it anyone who having spare time in that case spend it whole day simply by watching television programs or just laying on the bed? Do you need something totally new? This Marginal Models: For Dependent, Clustered, and Longitudinal Categorical Data (Statistics for Social and Behavioral Sciences) can be the answer, oh how comes? A book you know. You are and so out of date, spending your time by reading in this brand-new era is common not a geek activity. So what these textbooks have than the others?
